PROFILE SUMMARY

ECE graduate with a 3-month Software development internship and hands-on projects in data cleaning, SQL analysis, Power BI dashboards and image processing with OpenCV. Seeking an entry-level Data Analyst or Data Science role to apply and grow my technical skills.

TECHNICAL SKILLS

Programming: Python, C

Python Libraries: Pandas, NumPy, Matplotlib, Seaborn, OpenCV

Data & Visualization: Excel, Power BI (data cleaning, data modeling, DAX, data visualization)

Databases: SQL

Web: HTML, CSS

Tools: GitHub, VS Code, Canva

PROJECTS

Sales Performance Dashboard — *Python, Pandas, NumPy, SQL, Excel, Power BI*

- Cleaned and prepared a 3,090-record raw sales dataset using Pandas and Excel, retaining 2,997 valid records (**96.99% of the raw data**) after handling missing values, inconsistent fields and date formatting.
- Calculated revenue, profit and profit-margin KPIs and used SQL queries to analyze salesperson, regional and category-level performance.
- Built a Power BI dashboard surfacing top profitable products, monthly sales trends and regional performance for quick reporting.

Brain Tumor Detection in MRI Scans — *Python, OpenCV, Image Processing*

- Pre-processed MRI scans using grayscale conversion, bilateral filtering and CLAHE, then applied thresholding and morphological operations for skull stripping and tumor-region segmentation.
- Extracted shape and intensity features (circularity, area ratio, aspect ratio, mean/std intensity, distance from center) to rule-classify tumor-related regions — a classical computer vision pipeline, not a trained model.
- Generated annotated MRI outputs highlighting the detected regions.

Smart Rooftop System — *ESP32, Embedded C, Sensors, Bluetooth* — *Final-year team project (4 members)*

- Worked on automated rooftop control logic that closes the roof when rain is detected or temperature exceeds 35°C, with a limit switch for closed-position safety.
- Integrated a DHT11 sensor, rain sensor and Bluetooth for manual override (including partial commands like "Open 50%"), with a 16×2 I²C LCD showing live temperature, humidity, rain status and rooftop position.
- Powered by a solar panel and rechargeable battery for standalone operation.

INTERNSHIP

Software Development Intern — Cognifyz Technologies

03 Jan 2026 – 03 Apr 2026

- Built Python applications (CRUD operations, file-based task manager, pattern generation) and maintained them using Git and GitHub.
- Supported debugging and testing of an existing application under senior developer guidance, tracing program execution to fix errors.
- Added input validation and error-handling changes; tested multiple input conditions to identify issues.
- Used SQL queries to inspect and validate application data during debugging and testing.
- Documented assigned work and presented completed tasks and technical learnings to the team.

EDUCATION

B.E. Electronics and Communication Engineering, Anna University

2022 – 2026

Jai Shriram Engineering College | CGPA: 8.01

Class XII | 70.66%

2021 – 2022

Class X | 88.66%

2019 – 2020

CERTIFICATIONS

- Data Science — QSpiders (6-month program, started Aug 2026)

ADDITIONAL INFORMATION

Languages: English, Tamil, French

Achievement: 1st Prize, Chess Championship
