PROFILE SUMMARY

Electronics and Communication graduate with hands-on Python and data experience gained through academic projects and internships — cleaning, analyzing and visualizing real datasets with Pandas, NumPy, SQL and Power BI. Currently deepening data science fundamentals through a dedicated Python for Data Science program, and looking to bring a practical, project-driven approach to an entry-level Data Scientist role.

TECHNICAL SKILLS

Programming: Python, C

Data & Analysis: Pandas, NumPy, SQL, Excel, Power BI

Web: HTML, CSS

Tools: GitHub, VS Code, Canva

Concepts: Data Analysis Workflow, Machine Learning Fundamentals

PROJECTS

Sales Performance Dashboard — *Python, Pandas, NumPy, SQL, Excel, Power BI*

- Cleaned and prepared a **3,090-record** raw sales dataset down to **2,997 records** using Pandas and Excel, handling missing values, inconsistent fields and date formatting.
- Calculated revenue, profit and profit-margin KPIs and used SQL queries to analyze salesperson, regional and category-level performance.
- Built a Power BI dashboard surfacing top profitable products, monthly sales trends and regional performance for quick reporting.

Brain Tumor Detection in MRI Scans — *Python, OpenCV, Image Processing*

- Preprocessed MRI scans using grayscale conversion, bilateral filtering and CLAHE, then applied thresholding and morphological operations for skull stripping and tumor-region segmentation.
- Extracted shape and intensity features (circularity, area ratio, aspect ratio, mean/std intensity, distance from center) to rule-classify tumor-related regions — a classical computer vision pipeline, not a trained model.
- Generated annotated MRI outputs highlighting the detected regions.

Smart Rooftop System — *ESP32, Embedded C, Sensors, Bluetooth* — *Final-year team project (4 members)*

- Worked on automated rooftop control logic that closes the roof when rain is detected or temperature exceeds 35°C, with a limit switch for closed-position safety.
- Integrated a DHT11 sensor, rain sensor and Bluetooth for manual override (including partial commands like "Open 50%"), with a 16×2 I²C LCD showing live temperature, humidity, rain status and rooftop position.
- Powered by a solar panel and rechargeable battery for standalone operation.

INTERNSHIPS

Software Development Intern — Cognifyz Technologies (Remote)

03 Jan 2026 – 03 Feb 2026

- Built five Python programs — a number guessing game, pattern generator, CRUD console app, temperature converter and a persistent file-based task manager — practicing OOP, exception handling and file I/O.

Data Science Using Python Intern — CoolTech Solutions

07 Jan 2025 – 13 Jan 2025

- Explored data science fundamentals on a 2,000+ record sales dataset, cleaning data with Excel, Pandas and NumPy and building Power BI reports from the cleaned output.

Blockchain Technology Intern — BrainerSpot Technologies

07 Aug 2024 – 13 Aug 2024

- Implemented a basic Python blockchain — SHA-256 hashing, proof-of-work and chain validation — to understand core blockchain concepts.

Python, Machine Learning & Deep Learning Intern — Active Galaxy

26 Feb 2024 – 01 Mar 2024

- Gained foundational exposure to Python and how ML/DL concepts are applied in real-world AI projects.

EDUCATION

B.E. Electronics and Communication Engineering, Anna University

2022 – 2026

Jai Shriram Engineering College | CGPA: 7.88 (through 7th sem) | 12th: 70.66% | 10th: 88.66%

CERTIFICATIONS & ADDITIONAL INFORMATION

Currently Pursuing: Python with Data Science — QSpiders (6-month program, started Aug 2026)

Certification: Responsive Web Design — freeCodeCamp

Achievement: 1st Prize, Chess Championship

Languages: English, Tamil, French
